

HMP MECHANICAL SETTING RETRIEVABLE PACKER

The HMP Mechanical Retrieable Packer is a dual anchor mechanical set, retrievable single string packer for water injection and enhanced crude oil productivity. The packer is run in and retrievable with the tubing, and can be set/unpacked multiple times without being pulled out of the well. Simply rotate the tubing to set or recycle the packer. It is designed with an emergency releasing device, and the packer can be retrieved by lifting up when the oil pipe cannot be rotated.

FEATURES:

- Compact structure, easy and safe to descend;
- Double slip structure, can stretch or compress the packer;
- Internal bypass valve, release or retrieve the packer more stable;
- Emergency releasing device;
- Standard switch tool for completion accessories.
